ACKNOWLEDGEMENT

I would like to express my sincere gratitude to all those who contributed to the successful completion of this project.

First and foremost, I am grateful to **God Almighty** for His divine guidance, grace, and strength throughout this journey, without which this project would not have been possible.

I would like to extend my heartfelt thanks to **Dr. Ajimon George**, Principal of Marian College Kuttikkanam (Autonomous), and **Dr. Mendus Jacob**, Director of the PG Department of Computer Applications, for their continuous support and encouragement.

A special mention goes to **Mr. Win Mathew John**, Head of the PG Department of Computer Applications, whose leadership and motivation helped me stay focused and driven throughout the project.

I am deeply thankful to my **project guide, Mr. Robins A Kattoor**, Assistant Professor, PG Department of Computer Applications, for her expert guidance, patience, and valuable insights, which played an essential role in shaping this project.

I would also like to express my appreciation to all the faculty members of the **PG Department of Computer Applications**, whose support and timely assistance enriched my learning experience during the project.

Finally, I would like to thank my **family and friends** for their unwavering support, love, and encouragement, which gave me the strength to overcome challenges and complete this project successfully

JAYASURYA SUDHAKARAN

ABSTRACT

The Django-based freelance website is designed to make it easier for freelancers and clients to connect and collaborate. Clients can find professionals for services like web development, graphic design, content writing, and more, while freelancers get a platform to showcase their skills, bid on projects, and receive payments securely. The platform will include user-friendly profiles for both freelancers and clients, where they can highlight skills, portfolios, and reviews. Clients can post projects with budgets and deadlines, and freelancers can submit proposals and communicate directly with potential employers. To keep transactions safe, an escrow system will ensure payments are released only after successful project completion. Other features include a rating and review system to build trust, advanced search and filter options to make finding the right match easy, and real-time notifications for updates like new bids and messages. Built with Django, this platform will be scalable, secure, and easy to use, helping freelancers and businesses connect and work together seamlessly
